Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by
US006831718B2 (718).

718 teaches liquid crystal display device, comprising: a first substrate [34]; a second substrate [32]; a liquid crystal layer sandwiched between the first substrate and the second substrate [36]; transmissive display areas through which light incident from an outer surface of the first substrate is transmitted to perform transmissive display [216]; reflective display areas from which light incident from an outer surface of the second substrate is reflected to perform reflective display [212]; a thickness-adjusting layer to adjust a thickness of the liquid crystal layer [295], disposed on an inner surface of at least one of the first substrate and the second substrate [see figure 2], such that the liquid crystal layer is thinner in the reflective display areas than in the transmissive areas [see figure 2]; a color filter layer [244]; and a reflective film disposed in the reflective display areas [212], the reflective film having a light-scattering surface including projections, an edge portion of the reflective film lying in a boundary area between the transmissive display area and the reflective display area [see figure 2, the reflecting layer 212 extends to below the transmissive electrode], the edge portion having an upper surface serving as a mirror reflective surface [see tapered boundary, figure 2].
